Partnerships for Regional Invasive Species Management 2008

Map showing distribution of species in New York.
NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM

Documentation:
Sources of information:

A2.1. What is the likelihood that this species will occur and persist outside of cultivation given the climate in the following PRISMs? (obtain from PRISM invasiveness ranking form)

Very Likely
- Adirondack Park Invasive Program
- Capital/Mohawk
- Catskill Regional Invasive Species Partnership
- Finger Lakes
- Long Island Invasive Species Management Area
- Lower Hudson
- Saint Lawrence/Eastern Lake Ontario

Unknown
- Western New York

Documentation:
Sources of information (e.g.: distribution models, literature, expert opinions):

If the species does not occur and is not likely to occur with any of the PRISMs, then stop here as there is no need to assess the species.

A2.2. What is the current distribution of the species in each PRISM? (obtain rank from PRISM invasiveness ranking forms)

<table>
<thead>

</table>

Documentation:
Sources of information:
Brooklyn Botanic Garden, 2008.

A2.3. Describe the potential or known suitable habitats within New York. Natural habitats include all habitats not under active human management. Managed habitats are indicated with an asterisk.

Aquatic Habitats
- Salt/brackish waters
- Freshwater tidal
- Rivers/streams
- Natural lakes and ponds
- Vernal pools
- Reservoirs/impoundments*

Wetland Habitats
- Salt/brackish marshes
- Freshwater marshes
- Peatlands
- Shrub swamps
- Forested wetlands/riparian
- Ditches*
- Beaches and/or coastal dunes

Upland Habitats
- Cultivated*
- Grasslands/old fields
- Shrublands
- Forests/woodlands
- Alpine
- Roadsides*

Other potential or known suitable habitats within New York:

Documentation:
Sources of information:
NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM

B. INVASIVENESS RANKING

1. ECOLOGICAL IMPACT

1.1. Impact on Natural Ecosystem Processes and System-Wide Parameters (e.g. fire regime, geomorphological changes (erosion, sedimentation rates), hydrologic regime, nutrient and mineral dynamics, light availability, salinity, pH)

A. No perceivable impact on ecosystem processes based on research studies, or the absence of impact information if a species is widespread (>10 occurrences in minimally managed areas), has been well-studied (>10 reports/publications), and has been present in the northeast for >100 years.

B. Influences ecosystem processes to a minor degree (e.g., has a perceivable but mild influence on soil nutrient availability)

C. Significant alteration of ecosystem processes (e.g., increases sedimentation rates along streams or coastlines, reduces open water that are important to waterfowl)

D. Major, possibly irreversible, alteration or disruption of ecosystem processes (e.g., the species alters geomorphology and/or hydrology, affects fire frequency, alters soil pH, or fixes substantial levels of nitrogen in the soil making soil unlikely to support certain native plants or more likely to favor non-native species)

U. Unknown

Score 10

Documentation:
Identify ecosystem processes impacted (or if applicable, justify choosing answer A in the absence of impact information)
Species is capable of nitrogen fixation and thus altering soil chemistry and the nitrogen cycle.
Sources of information:
Fessenden, 1979; Pascke et al., 1980.

1.2. Impact on Natural Community Structure

A. No perceived impact; establishes in an existing layer without influencing its structure

B. Influences structure in one layer (e.g., changes the density of one layer)

C. Significant impact in at least one layer (e.g., creation of a new layer or elimination of an existing layer)

D. Major alteration of structure (e.g., covers canopy, eradicating most or all layers below)

U. Unknown

Score 10

Documentation:
Identify type of impact or alteration:
Increases shrub layer, and eradicates all of the layers below.
Sources of information:
Allan, & Steiner, 1965; Catling, 1997; Hamilton & Carpenter, 1975; ISSG, 2005; Zhang, 1981.

1.3. Impact on Natural Community Composition

A. No perceived impact; causes no apparent change in native populations

B. Influences community composition (e.g., reduces the number of individuals in one or more native species in the community)

C. Significantly alters community composition (e.g., produces a significant reduction in the population size of one or more native species in the community)

D. Causes major alteration in community composition (e.g., results in the extirpation of one or several native species, reducing biodiversity or change the community composition towards species exotic to the natural community)

U. Unknown
NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM

1.4. Impact on other species or species groups (cumulative impact of this species on the animals, fungi, microbes, and other organisms in the community it invades. Examples include reduction in nesting/foraging sites; reduction in habitat connectivity; injurious components such as spines, thorns, burrs, toxins; suppresses soil/sediment microflora; interferes with native pollinators and/or pollination of a native species; hybridizes with a native species; hosts a non-native disease which impacts a native species)

A. Negligible perceived impact 0
B. Minor impact 3
C. Moderate impact 7
D. Severe impact on other species or species groups 10
U. Unknown

Documentation:
Identify type of impact or alteration:
Changes the abundance and composition of native plants.
Sources of information:
Allan & Steiner, 1965; Catling, 1997; Hamilton & Carpenter, 1975; ISSG, 2005; Zhang, 1981.

Score 10

2. BIOLOGICAL CHARACTERISTICS AND DISPERSAL ABILITY

2.1. Mode and rate of reproduction (provisional thresholds, more investigation needed)

A. No reproduction by seeds or vegetative propagules (i.e. plant sterile with no sexual or asexual reproduction). 0
B. Limited reproduction (fewer than 10 viable seeds per plant AND no vegetative reproduction; if viability is not known, then maximum seed production is less than 100 seeds per plant and no vegetative reproduction) 1
C. Moderate reproduction (fewer than 100 viable seeds per plant - if viability is not known, then maximum seed production is less than 1000 seeds per plant - OR limited successful vegetative spread documented) 2
D. Abundant reproduction with vegetative asexual spread documented as one of the prime reproductive means OR more than 100 viable seeds per plant (if viability is not known, then maximum seed production reported to be greater than 1000 seeds per plant.) 4
U. Unknown

Documentation:
Describe key reproductive characteristics (including seeds per plant):
Copious seed production with as many as 44,000 seeds produced by a single plant.
Sources of information:
Allan & Steiner, 1965; Catling, 1997; Hamilton & Carpenter, 1975; ISSG, 2005; Zhang, 1981.

Score 4
## New York
### Non-Native Plant Invasiveness Ranking Form

#### 2.2. Innate potential for long-distance dispersal (e.g. bird dispersal, sticks to animal hair, buoyant fruits, pappus for wind-dispersal)

<table>
<thead>
<tr>
<th>Option</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Does not occur (no long-distance dispersal mechanisms)</td>
<td>0</td>
</tr>
<tr>
<td>B. Infrequent or inefficient long-distance dispersal (occurs occasionally despite lack of adaptations)</td>
<td>1</td>
</tr>
<tr>
<td>C. Moderate opportunities for long-distance dispersal (adaptations exist for long-distance dispersal, but studies report that 95% of seeds land within 100 meters of the parent plant)</td>
<td>2</td>
</tr>
<tr>
<td>D. Numerous opportunities for long-distance dispersal (adaptations exist for long-distance dispersal and evidence that many seeds disperse greater than 100 meters from the parent plant)</td>
<td>4</td>
</tr>
<tr>
<td>U. Unknown</td>
<td></td>
</tr>
</tbody>
</table>

**Documentation:**
Identify dispersal mechanisms:
Mainly by birds and small animals; dispersal can be more than 100 meters.
Sources of information:
ISSG, 2005.

#### 2.3. Potential to be spread by human activities (both directly and indirectly – possible mechanisms include: commercial sales, use as forage/revegetation, spread along highways, transport on boats, contaminated compost, land and vegetation management equipment such as mowers and excavators, etc.)

<table>
<thead>
<tr>
<th>Option</th>
<th>Score</th>

<tr>
<td>B. Possesses one characteristic that increases competitive advantage</td>
<td>3</td>
</tr>
<tr>
<td>C. Possesses two or more characteristics that increase competitive advantage</td>
<td>6</td>
</tr>
<tr>
<td>U. Unknown</td>
<td></td>
</tr>
</tbody>
</table>

**Documentation:**
Evidence of competitive ability:
Perennial habit, fast growth, and some shade tolerance.
Sources of information:
ISSG, 2005.

#### 2.5. Growth vigor

<table>
<thead>
<tr>
<th>Option</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Does not form thickets or have a climbing or smothering growth habit</td>
<td>0</td>
</tr>
<tr>
<td>B. Moderate opportunities for long-distance dispersal (adaptations exist for long-distance dispersal and evidence that many seeds disperse greater than 100 meters from the parent plant)</td>
<td>4</td>
</tr>
<tr>
<td>C. Numerous opportunities for long-distance dispersal (adaptations exist for long-distance dispersal and evidence that many seeds disperse greater than 100 meters from the parent plant)</td>
<td>4</td>
</tr>
<tr>
<td>U. Unknown</td>
<td></td>
</tr>
</tbody>
</table>

**Documentation:**
Identify dispersal mechanisms:
Mainly by birds and small animals; dispersal can be more than 100 meters.
Sources of information:
ISSG, 2005.
NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM

B. Has climbing or smothering growth habit, forms a dense layer above shorter vegetation, forms dense thickets, or forms a dense floating mat in aquatic systems where it smothers other vegetation or organisms  
Score 2

Documentation:
Describe growth form:
Forms large stands but not what the authors would characterize as thickets.
Sources of information:
Authors' personal observations.

2.6. Germination/Regeneration
A. Requires open soil or water and disturbance for seed germination, or regeneration from vegetative propagules.  
Score 0

B. Can germinate/regenerate in vegetated areas but in a narrow range or in special conditions  
Score 2

C. Can germinate/regenerate in existing vegetation in a wide range of conditions  
Score 3

U. Unknown (No studies have been completed)

Documentation:
Describe germination requirements:
No special conditions are needed for the germination, but widely adapted.
Sources of information:
ISSG, 2005.

2.7. Other species in the genus invasive in New York or elsewhere
A. No  
Score 0

B. Yes  
Score 3

U. Unknown

Score 3

Documentation:
Species:
Elaeagnus angustifolia.

Total Possible 25
Section Two Total 25

3. ECOLOGICAL AMPLITUDE AND DISTRIBUTION
3.1. Density of stands in natural areas in the northeastern USA and eastern Canada (use same definition as Gleason & Cronquist which is: “The part of the United States covered extends from the Atlantic Ocean west to the western boundaries of Minnesota, Iowa, northern Missouri, and southern Illinois, south to the southern boundaries of Virginia, Kentucky, and Illinois, and south to the Missouri River in Missouri. In Canada the area covered includes Nova Scotia, Prince Edward Island, New Brunswick, and parts of Quebec and Ontario lying south of the 47th parallel of latitude”)

A. No large stands (no areas greater than 1/4 acre or 1000 square meters)  
Score 0

B. Large dense stands present in areas with numerous invasive species already present or disturbed landscapes  
Score 2

C. Large dense stands present in areas with few other invasive species present (i.e. ability to invade relatively pristine natural areas)  
Score 4

U. Unknown

Score 2

<tr>
<td><strong>E.</strong> Known to occur in more than four of the habitats given at A2.3, with at least four a natural habitat.</td>
<td>6</td>
</tr>
<tr>
<td><strong>U.</strong> Unknown</td>
<td>Score 6</td>
</tr>
</tbody>
</table>

**Documentation:**
Identify type of habitats where it occurs and degree/type of impacts:
Wetland and upland
Sources of information:

### 3.3. Role of disturbance in establishment

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A.</strong> Requires anthropogenic disturbances to establish.</td>
<td>0</td>
</tr>
<tr>
<td><strong>B.</strong> May occasionally establish in undisturbed areas but can readily establish in areas with natural or anthropogenic disturbances.</td>
<td>2</td>
</tr>
<tr>
<td><strong>C.</strong> Can establish independent of any known natural or anthropogenic disturbances.</td>
<td>4</td>
</tr>
<tr>
<td><strong>U.</strong> Unknown</td>
<td>Score 2</td>
</tr>
</tbody>
</table>

**Documentation:**
Identify type of disturbance:
Generally becomes established in somewhat open areas following disturbance but can tolerate shaded conditions.
Sources of information:
Allan & Steiner, 1965; Catling, 1997; Hamilton & Carpenter, 1975; ISSG, 2005; Zhang, 1981.

### 3.4. Climate in native range

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A.</strong> Native range does not include climates similar to New York</td>
<td>0</td>
</tr>
<tr>
<td><strong>B.</strong> Native range possibly includes climates similar to at least part of New York.</td>
<td>1</td>
</tr>
<tr>
<td><strong>C.</strong> Native range includes climates similar to those in New York</td>
<td>3</td>
</tr>
<tr>
<td><strong>U.</strong> Unknown</td>
<td>Score 3</td>
</tr>
</tbody>
</table>

**Documentation:**
Describe what part of the native range is similar in climate to New York:
Native area in temperate Asia includes climates similar to those in New York.
Sources of information:
Allan & Steiner, 1965; Catling, 1997; Hamilton & Carpenter, 1975; ISSG, 2005; Zhang, 1981.

### 3.5. Current introduced distribution in the northeastern USA and eastern Canada (see question 3.1 for definition of geographic scope )

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>A.</strong> Not known from the northeastern US and adjacent Canada</td>

</tbody>
</table>
### NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM

| B. | Present as a non-native in one northeastern USA state and/or eastern Canadian province. | 1 |
| C. | Present as a non-native in 2 or 3 northeastern USA states and/or eastern Canadian provinces. | 2 |
| D. | Present as a non-native in 4–8 northeastern USA states and/or eastern Canadian provinces, and/or categorized as a problem weed (e.g., “Noxious” or “Invasive”) in 1 northeastern state or eastern Canadian province. | 3 |
| E. | Present as a non-native in >8 northeastern USA states and/or eastern Canadian provinces, and/or categorized as a problem weed (e.g., “Noxious” or “Invasive”) in 2 northeastern states or eastern Canadian provinces. | 4 |
| U. | Unknown | Score 4 |

**Documentation:**
Identify states and provinces invaded:
CT, DC, DE, IA, IL, IN, KY, MA, MD, ME, MI, NH, NJ, NY, OH, PA, RI, VA, VT, WI, WV; ON.
Sources of information:
- See known introduced range in plants.usda.gov, and update with information from states and Canadian provinces.
USDA, 2008.

#### 3.6. Current introduced distribution of the species in natural areas in the eight New York State PRISMs (Partnerships for Regional Invasive Species Management)

| A. | Present in none of the PRISMs | 0 |
| B. | Present in 1 PRISM | 1 |
| C. | Present in 2 PRISMs | 2 |
| D. | Present in 3 PRISMs | 3 |
| E. | Present in more than 3 PRISMs or on the Federal noxious weed lists | 4 |
| U. | Unknown | Score 4 |

**Documentation:**
Describe distribution:
APIPP, Capital/Mohawk, CRISP, Finger Lake, Lower Hudson, SLELO and LHSMA
Sources of information:

#### 4. DIFFICULTY OF CONTROL

##### 4.1. Seed banks

| A. | Seeds (or vegetative propagules) remain viable in soil for less than 1 year, or does not make viable seeds or persistent propagules. | 0 |
| B. | Seeds (or vegetative propagules) remain viable in soil for at least 1 to 10 years | 2 |
| C. | Seeds (or vegetative propagules) remain viable in soil for more than 10 years | 3 |
| U. | Unknown | Score 2 |

**Documentation:**
Identify longevity of seed bank:
Seeds remain viable for a few years; no evidence they survive more than ten years.

<td></td>
</tr>
</tbody>
</table>

**Documentation:**

Describe vegetative response:

Growth from basal branches at ground level and root shoots.

**Sources of information:**

ISSG, 2005.

Score **2**

#### 4.3. Level of effort required

<table>
<thead>
<tr>
<th>Description</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Management is not required: e.g., species does not persist without repeated anthropogenic disturbance.</td>
<td>0</td>
</tr>
<tr>
<td>B. Management is relatively easy and inexpensive: e.g. 10 or fewer person-hours of manual effort (pulling, cutting and/or digging) can eradicate a 1 acre infestation in 1 year (infestation averages 50% cover or 1 plant/100 ft²).</td>
<td>2</td>
</tr>
<tr>
<td>C. Management requires a major short-term investment: e.g. 100 or fewer person-hours/year of manual effort, or up to 10 person-hours/year using mechanical equipment (chain saws, mowers, etc.) for 2-5 years to suppress a 1 acre infestation. Eradication is difficult, but possible (infestation as above).</td>
<td>3</td>
</tr>
<tr>
<td>D. Management requires a major investment: e.g. more than 100 person-hours/year of manual effort, or more than 10 person hours/year using mechanical equipment, or the use of herbicide, grazing animals, fire, etc. for more than 5 years to suppress a 1 acre infestation. Eradication may be impossible (infestation as above).</td>
<td>4</td>
</tr>
<tr>
<td>U. Unknown</td>
<td></td>
</tr>
</tbody>
</table>

**Documentation:**

Identify types of control methods and time-term required:

It is impossible to remove or eradicate once established.

**Sources of information:**

ISSG, 2005.

Score **4**

**Total Possible** 10

**Section Four Total** 8

**Total for 4 sections Possible** 100

**Total for 4 sections** 94

---

### C. STATUS OF CULTIVARS AND HYBRIDS:

At the present time (May 2008) there is no protocol or criteria for assessing the invasiveness of cultivars independent of the species to which they belong. Such a protocol is needed, and individuals with the appropriate expertise should address this issue in the future. Such a protocol will likely require data on cultivar fertility and identification in both experimental and natural settings.

Hybrids (crosses between different parent species) should be assessed individually and separately from the parent species wherever taxonomically possible, since their invasiveness may differ from that of the parent species. An exception should be made if the taxonomy of the species and hybrids are uncertain,
and species and hybrids can not be clearly distinguished in the field. In such cases it is not feasible to distinguish species and hybrids, and they can only be assessed as a single unit.

Some cultivars of the species known to be available:

**References for species assessment:**

Citation: This NY ranking form may be cited as: Jordan, M.J., G. Moore and T.W. Weldy. 2008. Invasiveness ranking system for non-native plants of New York. Unpublished. The Nature Conservancy, Cold Spring Harbor, NY; Brooklyn Botanic Garden, Brooklyn, NY; The Nature Conservancy, Albany, NY. Note that the order of authorship is alphabetical; all three authors contributed substantially to the development of this protocol.

Acknowledgments: The NY form incorporates components and approaches used in several other systems, cited in the references below. Valuable contributions by members of the Long Island Invasive Species Management Area’s Scientific Review Committee were incorporated in revisions of this form. Original members of the LIISMA SRC included representatives of the Brooklyn Botanic Garden; The Nature Conservancy; New York Natural Heritage Program, New York Sea Grant; New York State Office of Parks, Recreation and Historic Preservation; National Park Service; Brookhaven National Laboratory; New York State Department of Environmental Conservation Region 1; Cornell Cooperative Extension of Suffolk/Nassau Counties; Long Island Nursery and Landscape Association; Long Island Farm Bureau; SUNY Farmingdale Ornamental Horticulture Department; Queens College Biology Department; Long Island Botanical Society; Long Island Weed Information Management System database manager; Suffolk County Department of Parks, Recreation and Conservation; Nassau County Department of Parks, Recreation and Museums; Suffolk County Soil & Water Conservation District.
