New York
NON-NATIVE PLANT INVASIVENESS RANKING FORM

Scientific name: Saponaria officinalis L. USDA Plants Code: SAOF4
Common names: Bouncing-bet, bouncing betty, soapwort
Native distribution: Eurasia
Date assessed: 2 June 2009
Assessors: Steve Glenn, Gerry Moore
Reviewers: LIISMA SRC
Date Approved: July 8, 2009 Form version date: 3 March 2009

New York Invasiveness Rank: Moderate (Relative Maximum Score 50.00-69.99)

Distribution and Invasiveness Rank (Obtain from PRISM invasiveness ranking form)

</tbody>
</table>
A2.1. What is the likelihood that this species will occur and persist outside of cultivation, given the climate in the following PRISMs? (obtain from PRISM invasiveness ranking form)

- Not Assessed Adirondack Park Invasive Program
- Not Assessed Capital/Mohawk
- Not Assessed Catskill Regional Invasive Species Partnership
- Not Assessed Finger Lakes
- Very Likely Long Island Invasive Species Management Area
- Not Assessed Lower Hudson
- Not Assessed Saint Lawrence/Eastern Lake Ontario
- Not Assessed Western New York

Documentation:
Sources of information (e.g.: distribution models, literature, expert opinions): Well established in PRISM. Brooklyn Botanic Garden, 2009.

If the species does not occur and is not likely to occur with any of the PRISMs, then stop here as there is no need to assess the species.

A2.2. What is the current distribution of the species in each PRISM? (obtain rank from PRISM invasiveness ranking forms)

- Adirondack Park Invasive Program: Not Assessed
- Capital/Mohawk: Not Assessed
- Catskill Regional Invasive Species Partnership: Not Assessed
- Finger Lakes: Not Assessed
- Long Island Invasive Species Management Area: Widespread
- Lower Hudson: Not Assessed
- Saint Lawrence/Eastern Lake Ontario: Not Assessed
- Western New York: Not Assessed

Documentation:
Sources of information: Brooklyn Botanic Garden, 2009.

A2.3. Describe the potential or known suitable habitats within New York. Natural habitats include all habitats not under active human management. Managed habitats are indicated with an asterisk.

Aquatic Habitats
- Salt/brackish waters
- Freshwater tidal
- Rivers/streams
- Natural lakes and ponds
- Vernal pools
- Reservoirs/impoundments*

Wetland Habitats
- Salt/brackish marshes
- Freshwater marshes
- Peatlands
- Shrub swamps
- Forested wetlands/riparian
- Ditches*
- Beaches and/or coastal dunes

Upland Habitats
- Cultivated*
- Grasslands/old fields
- Shrublands
- Forests/woodlands
- Alpine
- Roadside*

Other potential or known suitable habitats within New York:
Ballast grounds, waste areas, railroads, wood edges, riparian sand flats; stream sides.

Documentation:
Sources of information:
B. INVASIVENESS RANKING

Questions apply to areas similar in climate and habitats to New York unless specified otherwise.

1. ECOLOGICAL IMPACT

1.1. Impact on Natural Ecosystem Processes and System-Wide Parameters (e.g. fire regime, geomorphological changes (erosion, sedimentation rates), hydrologic regime, nutrient and mineral dynamics, light availability, salinity, pH)

<table>
<thead>
<tr>
<th>Score</th>
<th>Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. 0</td>
<td>No perceivable impact on ecosystem processes based on research studies, or the absence of impact information if a species is widespread (&gt;10 occurrences in minimally managed areas), has been well-studied (&gt;10 reports/publications), and has been present in the northeast for &gt;100 years.</td>
</tr>
<tr>
<td>B. 3</td>
<td>Influences ecosystem processes to a minor degree (e.g., has a perceivable but mild influence on soil nutrient availability)</td>
</tr>
<tr>
<td>C. 7</td>
<td>Significant alteration of ecosystem processes (e.g., increases sedimentation rates along streams or coastlines, reduces open water that are important to waterfowl)</td>
</tr>
<tr>
<td>D. 10</td>
<td>Major, possibly irreversible, alteration or disruption of ecosystem processes (e.g., the species alters geomorphology and/or hydrology, affects fire frequency, alters soil pH, or fixes substantial levels of nitrogen in the soil making soil unlikely to support certain native plants or more likely to favor non-native species)</td>
</tr>
<tr>
<td>U.</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

1.2. Impact on Natural Community Structure

<table>
<thead>
<tr>
<th>Score</th>
<th>Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. 0</td>
<td>No perceived impact; establishes in an existing layer without influencing its structure</td>
</tr>
<tr>
<td>B. 3</td>
<td>Influences structure in one layer (e.g., changes the density of one layer)</td>
</tr>
<tr>
<td>C. 7</td>
<td>Significant impact in at least one layer (e.g., creation of a new layer or elimination of an existing layer)</td>
</tr>
<tr>
<td>D. 10</td>
<td>Major alteration of structure (e.g., covers canopy, eradicating most or all layers below)</td>
</tr>
<tr>
<td>U.</td>
<td>Unknown</td>
</tr>
</tbody>
</table>

1.3. Impact on Natural Community Composition

<table>
<thead>
<tr>
<th>Score</th>
<th>Documentation</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. 0</td>
<td>No perceived impact; causes no apparent change in native populations</td>
</tr>
<tr>
<td>B. 3</td>
<td>Influences community composition (e.g., reduces the number of individuals in one or more native species in the community)</td>
</tr>
<tr>
<td>C. 7</td>
<td>Significantly alters community composition (e.g., produces a significant reduction in the population size of one or more native species in the community)</td>
</tr>
</tbody>
</table>
| D. 10 | Causes major alteration in community composition (e.g., results in the extirpation of one or
several native species, reducing biodiversity or change the community composition towards species exotic to the natural community)

U. Unknown

Documentation:
Identify type of impact or alteration:
Dense stands can reduce the number of individuals of native species found in the community.

Sources of information:
Authors' pers. obs.

1.4. Impact on other species or species groups (cumulative impact of this species on the animals, fungi, microbes, and other organisms in the community it invades. Examples include reduction in nesting/foraging sites; reduction in habitat connectivity; injurious components such as spines, thorns, burrs, toxins; suppresses soil/sediment microflora; interferes with native pollinators and/or pollination of a native species; hybridizes with a native species; hosts a non-native disease which impacts a native species)

A. Negligible perceived impact
B. Minor impact
C. Moderate impact
D. Severe impact on other species or species groups
U. Unknown

Documentation:
Identify type of impact or alteration:
No studies on the impact of other species located.

Sources of information:
Lu, 2004; authors' pers. comm.

Total Possible 20
Section One Total 6

2. BIOLOGICAL CHARACTERISTICS AND DISPERSAL ABILITY

2.1. Mode and rate of reproduction (provisional thresholds, more investigation needed)

A. No reproduction by seeds or vegetative propagules (i.e. plant sterile with no sexual or asexual reproduction).
B. Limited reproduction (fewer than 10 viable seeds per plant AND no vegetative reproduction; if viability is not known, then maximum seed production is less than 100 seeds per plant and no vegetative reproduction)
C. Moderate reproduction (fewer than 100 viable seeds per plant - if viability is not known, then maximum seed production is less than 1000 seeds per plant - OR limited successful vegetative spread documented)
D. Abundant reproduction with vegetative asexual spread documented as one of the plants prime reproductive means OR more than 100 viable seeds per plant (if viability is not known, then maximum seed production reported to be greater than 1000 seeds per plant.)
U. Unknown

Documentation:
Describe key reproductive characteristics (including seeds per plant):
Examination of fresh and dried herbarium material suggests that plants produce a moderate amount of seed (ie., lower 100 but ess than 1000 with viability not known).
2.2. Innate potential for long-distance dispersal (e.g. bird dispersal, sticks to animal hair, buoyant fruits, pappus for wind-dispersal)

<table>
<thead>
<tr>
<th>A.</th>
<th>Does not occur (no long-distance dispersal mechanisms)</th>
<th>0</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.</td>
<td>Infrequent or inefficient long-distance dispersal (occurs occasionally despite lack of adaptations)</td>
<td>1</td>
</tr>
<tr>
<td>C.</td>
<td>Moderate opportunities for long-distance dispersal (adaptations exist for long-distance dispersal, but studies report that 95% of seeds land within 100 meters of the parent plant)</td>
<td>2</td>
</tr>
<tr>
<td>D.</td>
<td>Numerous opportunities for long-distance dispersal (adaptations exist for long-distance dispersal and evidence that many seeds disperse greater than 100 meters from the parent plant)</td>
<td>4</td>
</tr>
<tr>
<td>U.</td>
<td>Unknown</td>
<td>Score 1</td>
</tr>
</tbody>
</table>

Documentation:
Identify dispersal mechanisms:
No studies located on dispersal of seed. seeds appear to lack adaptations but are small and long distance transport would seem to occasionally occur via animals (epizoochory) or water.
Sources of information:
Author's (Moore's) pers. obs.

2.3. Potential to be spread by human activities (both directly and indirectly – possible mechanisms include: commercial sales, use as forage/revegetation, spread along highways, transport on boats, contaminated compost, land and vegetation management equipment such as mowers and excavators, etc.)

<table>
<thead>
<tr>
<th>A.</th>
<th>Does not occur</th>
<th>0</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.</td>
<td>Low (human dispersal to new areas occurs almost exclusively by direct means and is infrequent or inefficient)</td>
<td>1</td>
</tr>
<tr>
<td>C.</td>
<td>Moderate (human dispersal to new areas occurs by direct and indirect means to a moderate extent)</td>
<td>2</td>
</tr>
<tr>
<td>D.</td>
<td>High (opportunities for human dispersal to new areas by direct and indirect means are numerous, frequent, and successful)</td>
<td>3</td>
</tr>
<tr>
<td>U.</td>
<td>Unknown</td>
<td>Score 2</td>
</tr>
</tbody>
</table>

Documentation:
Identify dispersal mechanisms:
Cultivated as an ornamental, seed sold in the United States since the early 1800's (Mack, 1991) and continued to be sold on the internet (author's personal observations). Historically used in medicine and as a soap (Mitich, 1990). Seeds could also be readily transported by humans, especially through mowing equipment.
Sources of information:

2.4. Characteristics that increase competitive advantage, such as shade tolerance, ability to grow on infertile soils, perennial habit, fast growth, nitrogen fixation, allelopathy, etc.

<table>
<thead>
<tr>
<th>A.</th>
<th>Possesses no characteristics that increase competitive advantage</th>
<th>0</th>
</tr>
</thead>
<tbody>
<tr>
<td>B.</td>
<td>Possesses one characteristic that increases competitive advantage</td>
<td>3</td>
</tr>
<tr>
<td>C.</td>
<td>Possesses two or more characteristics that increase competitive advantage</td>
<td>6</td>
</tr>
<tr>
<td>U.</td>
<td>Unknown</td>
<td>Score 6</td>
</tr>

### 3. ECOLOGICAL AMPLITUDE AND DISTRIBUTION

**3.1. Density of stands in natural areas in the northeastern USA and eastern Canada**

(Use same definition as Gleason & Cronquist which is: “The part of the United States covered extends from the Atlantic Ocean west to the western boundaries of Minnesota, Iowa, northern Missouri, and southern Illinois, south to the southern boundaries of Virginia, Kentucky, and Illinois, and south to the Missouri River in Missouri. In Canada the area covered includes Nova Scotia, Prince Edward Island, New Brunswick, and parts of Quebec and Ontario lying south of the 47th parallel of...
### New York
**Non-Native Plant Invasiveness Ranking Form**

**Latitude**

A. No large stands (no areas greater than 1/4 acre or 1000 square meters)  
   Score: 0

B. Large dense stands present in areas with numerous invasive species already present or disturbed landscapes  
   Score: 2

C. Large dense stands present in areas with few other invasive species present (i.e. ability to invade relatively pristine natural areas)  
   Score: 4

U. Unknown  
   Score: 0

**Documentation:**
- Identify reason for selection, or evidence of weedy history:  
  No large stands observed in the Northeast region, nor any literature locating suggesting this.
- Sources of information: Lu, 2004; authors' personal observations

**3.2. Number of habitats the species may invade**

A. Not known to invade any natural habitats given at A2.3  
   Score: 0

B. Known to occur in two or more of the habitats given at A2.3, with at least one a natural habitat.  
   Score: 1

C. Known to occur in three or more of the habitats given at A2.3, with at least two a natural habitat.  
   Score: 2

D. Known to occur in four or more of the habitats given at A2.3, with at least three a natural habitat.  
   Score: 4

E. Known to occur in more than four of the habitats given at A2.3, with at least four a natural habitat.  
   Score: 6

U. Unknown  
   Score: 6

**Documentation:**
- Identify type of habitats where it occurs and degree/type of impacts:  
  See A2.3.

**3.3. Role of disturbance in establishment**

A. Requires anthropogenic disturbances to establish.  
   Score: 0

B. May occasionally establish in undisturbed areas but can readily establish in areas with natural or anthropogenic disturbances.  
   Score: 2

C. Can establish independent of any known natural or anthropogenic disturbances.  
   Score: 4

U. Unknown  
   Score: 2

**Documentation:**
- Identify type of disturbance:  
  Observed colonizing disturbed habitats, generally absent from pristine habitats in the Northeast region.
- Sources of information: Lu, 2004; authors' personal observations

**3.4. Climate in native range**

A. Native range does not include climates similar to New York  
   Score: 0

B. Native range possibly includes climates similar to at least part of New York.  
   Score: 1

C. Native range includes climates similar to those in New York  
   Score: 3

U. Unknown  
   Score: 3
NEW YORK
NON-NATIVE PLANT INVASIVENESS RANKING FORM

Documentation:
Describe what part of the native range is similar in climate to New York:
Eurasia, as far north as Sweden.
Sources of information:

3.5. Current introduced distribution in the northeastern USA and eastern Canada (see question 3.1 for definition of geographic scope)

A. Not known from the northeastern US and adjacent Canada 0
B. Present as a non-native in one northeastern USA state and/or eastern Canadian province. 1
C. Present as a non-native in 2 or 3 northeastern USA states and/or eastern Canadian provinces. 2
D. Present as a non-native in 4–8 northeastern USA states and/or eastern Canadian provinces, and/or categorized as a problem weed (e.g., “Noxious” or “Invasive”) in 1 northeastern state or eastern Canadian province. 3
E. Present as a non-native in >8 northeastern USA states and/or eastern Canadian provinces, and/or categorized as a problem weed (e.g., “Noxious” or “Invasive”) in 2 northeastern states or eastern Canadian provinces. 4
U. Unknown

Score 4

Documentation:
Identify states and provinces invaded:
Documented from all northeastern states and provinces.
Sources of information: See known introduced range in plants.usda.gov, and update with information from states and Canadian provinces.

3.6. Current introduced distribution of the species in natural areas in the eight New York State PRISMs (Partnerships for Regional Invasive Species Management)

A. Present in none of the PRISMs 0
B. Present in 1 PRISM 1
C. Present in 2 PRISMs 2
D. Present in 3 PRISMs 3
E. Present in more than 3 PRISMs or on the Federal noxious weed lists 4
U. Unknown

Score 4

Describe distribution:
See A1.1.
Sources of information:

Total Possible 25
Section Three Total 19

4. DIFFICULTY OF CONTROL

4.1. Seed banks
A. Seeds (or vegetative propagules) remain viable in soil for less than 1 year, or does not make viable seeds or persistent propagules. 0
B. Seeds (or vegetative propagules) remain viable in soil for at least 1 to 10 years 2
# New York

## Non-native Plant Invasiveness Ranking Form

| C. | Seeds (or vegetative propagules) remain viable in soil for more than 10 years | 3 |
| U. | Unknown | Score 2 |

**Documentation:**
- Identify longevity of seed bank:
  - One germination study found seeds viable for at least 2-3 years.

**Sources of information:**
- Steinbauer & Grigsby, 1957.

### 4.2. Vegetative regeneration

| A. | No regrowth following removal of aboveground growth | 0 |
| B. | Regrowth from ground-level meristems | 1 |
| C. | Regrowth from extensive underground system | 2 |
| D. | Any plant part is a viable propagule | 3 |
| U. | Unknown | Score 2 |

**Documentation:**
- Describe vegetative response:
  - Can reproduce by suckering, root runners, or pieces of root. Baker et al. characterized the plant as rhizomatous.

**Sources of information:**
- Baker et al., 2004; Lu, 2004.

### 4.3. Level of effort required

| A. | Management is not required: e.g., species does not persist without repeated anthropogenic disturbance. | 0 |
| B. | Management is relatively easy and inexpensive: e.g. 10 or fewer person-hours of manual effort (pulling, cutting and/or digging) can eradicate a 1 acre infestation in 1 year (infestation averages 50% cover or 1 plant/100 ft²). | 2 |
| C. | Management requires a major short-term investment: e.g. 100 or fewer person-hours/year of manual effort, or up to 10 person-hours/year using mechanical equipment (chain saws, mowers, etc.) for 2-5 years to suppress a 1 acre infestation. Eradication is difficult, but possible (infestation as above). | 3 |
| D. | Management requires a major investment: e.g. more than 100 person-hours/year of manual effort, or more than 10 person hours/year using mechanical equipment, or the use of herbicide, grazing animals, fire, etc. for more than 5 years to suppress a 1 acre infestation. Eradication may be impossible (infestation as above). | 4 |
| U. | Unknown | Score 0 |

**Documentation:**
- Identify types of control methods and time-term required:

**Sources of information:**
- Baker et al., 2004; authors' pers. obs.

| Total Possible | 10 |
| Section Four Total | 4 |

| Total for 4 sections Possible | 80 |
| Total for 4 sections | 42 |

## C. Status of Cultivars and Hybrids:
At the present time (May 2008) there is no protocol or criteria for assessing the invasiveness of cultivars independent of the species to which they belong. Such a protocol is needed, and individuals with the appropriate expertise should address this issue in the future. Such a protocol will likely require data on cultivar fertility and identification in both experimental and natural settings.

Hybrids (crosses between different parent species) should be assessed individually and separately from the parent species wherever taxonomically possible, since their invasiveness may differ from that of the parent species. An exception should be made if the taxonomy of the species and hybrids are uncertain, and species and hybrids can not be clearly distinguished in the field. In such cases it is not feasible to distinguish species and hybrids, and they can only be assessed as a single unit.

Some cultivars of the species known to be available: 'Flore Pleno'
