

NEW YORK FISH & AQUATIC INVERTEBRATE INVASIVENESS RANKING FORM

Scientific name: Hypophthalmichthys harmandi
 Common names: Largescale Silver Carp
 Native distribution: Northern Hainan Island China and Red River Vietnam
 Date assessed: 06/10/2013
 Assessors: D. Adams
 Reviewers: _____
 Date Approved: _____ Form version date: 3 January 2013

New York Invasiveness Rank: Moderate (Relative Maximum Score 50.00-69.99)

Distribution and Invasiveness Rank (Obtain from PRISM invasiveness ranking form)		
Status of this species in each PRISM:	Current Distribution	PRISM Invasiveness Rank
1 Adirondack Park Invasive Program	Not Present	Not Assessed
2 Capital/Mohawk	Not Present	Not Assessed
3 Catskill Regional Invasive Species Partnership	Not Present	Not Assessed
4 Finger Lakes	Not Present	Not Assessed
5 Long Island Invasive Species Management Area	Not Present	Not Assessed
6 Lower Hudson	Not Present	Not Assessed
7 Saint Lawrence/Eastern Lake Ontario	Not Present	Not Assessed
8 Western New York	Not Present	Not Assessed

Invasiveness Ranking Summary (see details under appropriate sub-section)		Total (Total Answered*) Possible	Total
1	Ecological impact	30 (<u>30</u>)	21
2	Biological characteristic and dispersal ability	30 (<u>30</u>)	27
3	Ecological amplitude and distribution	30 (<u>30</u>)	10
4	Difficulty of control	10 (<u>10</u>)	5
	Outcome score	100 (<u>100</u>) ^b	63 ^a
	Relative maximum score †		63
	New York Invasiveness Rank §	Moderate (Relative Maximum Score 50.00-69.99)	

* For questions answered "unknown" do not include point value in "Total Answered Points Possible." If "Total Answered Points Possible" is less than 70.00 points, then the overall invasive rank should be listed as "Unknown."

† Calculated as 100(a/b) to two decimal places.

§ Very High >80.00; High 70.00–80.00; Moderate 50.00–69.99; Low 40.00–49.99; Insignificant <40.00

A. DISTRIBUTION (KNOWN/POTENTIAL): Summarized from individual PRISM forms

A1.1. Has this species been documented in NY? (reliable source; voucher not required)		
<input type="checkbox"/>	Yes – continue to A1.2	
<input checked="" type="checkbox"/>	No – continue to A2.1; Yes <input type="checkbox"/> NA; Yes <input type="checkbox"/> USA	
A1.2. In which PRISMs is it known (see inset map)?		
<input type="checkbox"/>	Adirondack Park Invasive Program	
<input type="checkbox"/>	Capital/Mohawk	
<input type="checkbox"/>	Catskill Regional Invasive Species Partnership	
<input type="checkbox"/>	Finger Lakes	
<input type="checkbox"/>	Long Island Invasive Species Management Area	
<input type="checkbox"/>	Lower Hudson	
<input type="checkbox"/>	Saint Lawrence/Eastern Lake Ontario	

NEW YORK FISH & AQUATIC INVERTEBRATE INVASIVENESS RANKING FORM

<input type="checkbox"/>	Western New York
--------------------------	------------------

Documentation:
Sources of information:

A2.0. Is this species listed on the Federal Injurious Fish and Wildlife list?

- Yes – the species will automatically be listed as Prohibited, no further assessment required.
 No – continue to A2.1

A2.1. What is the likelihood that this species will occur and persist given the climate in the following PRISMs? (obtain from PRISM invasiveness ranking form and/ or Climatch score)

- Unlikely Adirondack Park Invasive Program
 Unlikely Capital/Mohawk
 Unlikely Catskill Regional Invasive Species Partnership
 Unlikely Finger Lakes
 Unlikely Long Island Invasive Species Management Area
 Unlikely Lower Hudson
 Unlikely Saint Lawrence/Eastern Lake Ontario
 Unlikely Western New York

Documentation:
Sources of information (e.g.: distribution models, literature, expert opinions):

If the species does not occur and is not likely to survive and reproduce within any of the PRISMs, then stop here as there is no need to assess the species.

A2.2. What is the current distribution of the species in each PRISM? (obtain rank from PRISM invasiveness ranking forms)

Adirondack Park Invasive Program	Distribution
Capital/Mohawk	Not Present
Catskill Regional Invasive Species Partnership	Not Present
Finger Lakes	Not Present
Long Island Invasive Species Management Area	Not Present
Lower Hudson	Not Present
Saint Lawrence/Eastern Lake Ontario	Not Present
Western New York	Not Present

Documentation:
Sources of information:

A2.3. Describe the potential or known suitable habitats within New York. Natural habitats include all habitats not under active human management. Managed habitats are indicated with an asterisk.

- | | | |
|---|---|---|

**NEW YORK
FISH & AQUATIC INVERTEBRATE INVASIVENESS RANKING FORM**

B. INVASIVENESS RANKING

1. ECOLOGICAL IMPACT

1.1. Impact on Ecosystem Processes and System-wide Parameters (e.g., water cycle, energy cycle, nutrient and mineral dynamics, light availability, or geomorphological changes (erosion and sedimentation rates).

- A. No perceivable impact on ecosystem processes based on research studies, or the absence of impact information if a species is widespread (>10 occurrences in minimally managed areas), has been well-studied (>10 reports/publications), and has been present in the northeast for >100 years. 0
- B. Influences ecosystem processes to a minor degree, has a perceivable but mild influence 3
- C. Significant alteration of ecosystem processes 7
- D. Major, possibly irreversible, alteration or disruption of ecosystem processes 10
- U. Unknown

Score 7

Documentation:

Identify ecosystem processes impacted (or if applicable, justify choosing answer A in the absence of impact information)

Largescale silver carp feed on phtoplankton and prefer slow-moving, plankton-rich open water.

Sources of information:

USFWS 2007

1.2. Impact on Natural Habitat/ Community Composition

- A. No perceived impact; causes no apparent change in native populations 0
- B. Influences community composition (e.g., reduces the number of individuals of one or more native species in the community) 3
- C. Significantly alters community composition (e.g., produces a significant reduction in the population size of one or more native species in the community) 7
- D. Causes major alteration in community composition (e.g., results in the extirpation of one or several native species, reducing biodiversity or change the community composition towards species exotic to the natural community) 10
- U. Unknown

Score 7

Documentation:

Identify type of impact or alteration:

Because this species is most closely related to silver carp, its potential effectiveness in controlling algae and its effect on excess nutrients in closed systems is possibly similar to that of silver carp.

Sources of information:

USFWS 2007

1.3. Impact on other species or species groups, including cumulative impact of this species on other organisms in the community it invades. (e.g., interferes with native predator/ prey dynamics; injurious components/ spines; reduction in spawning; hybridizes with a native species; hosts a non-native disease which impacts a native species)

- A. Negligible perceived impact 0
- B. Minor impact (e.g. impacts 1 species, <20% population decline, limited host damage) 3
- C. Moderate impact (e.g. impacts 2-3 species and/ or 20-29% population decline of any 1 species, kills host in 2-5 years, ,) 7
- D. Severe impact on other species or species groups (e.g. impacts >3 species and/ or ≥30% population decline of any 1 species, kills host within 2 years, extirpation) 10

**NEW YORK
FISH & AQUATIC INVERTEBRATE INVASIVENESS RANKING FORM**

U. Unknown

Score

Documentation:

Identify type of impact or alteration:

Largescale silver carp x silver carp hybrids are more cold tolerant than pure largescale silver carp. At least three trematode parasites are known to infect largescale silver carp.

Sources of information:

USFWS 2007

Total Possible
Section One Total

2. BIOLOGICAL CHARACTERISTICS AND DISPERSAL ABILITY

2.1. Mode and rate of reproduction (provisional thresholds, more investigation needed)

- A. No reproduction (e.g. sterile with no sexual or asexual reproduction). 0
- B. Limited reproduction (e.g., intrinsic rate of increase <10%, low fecundity, complete one life cycle) 1
- C. Moderate reproduction (e.g., intrinsic rate of increase between 10-30%, moderate fecundity, complete 2-3 life cycles) 2
- D. Abundant reproduction (e.g., intrinsic rate of increase >30%, parthenogenesis, large egg masses, complete > 3 life cycles) 4
- U. Unknown

Score

Documentation:

Describe key reproductive characteristics:

Largescale silver carp reach sexual maturity at a younger age than silver carp.

Sources of information:

USFWS 2007

2.2. Migratory behavior

- A. Always migratory in its native range 0
- B. Non-migratory or facultative migrant in its native range 2
- U. Unknown

Score

Documentation:

Describe migratory behavior:

Sources of information:

nas.er.usgs.gov; www.fishbase.org

2.3. Biological potential for colonization by long-distance dispersal/ movement (e.g., veligers, resting stage eggs, glochidia)

- A. No long-distance dispersal/ movement mechanisms 0
- B. Adaptations exist for long-distance dispersal, but studies report that most individuals (90%) establish territories within 5 miles of natal origin or within a distance twice the home range of the typical individual, and tend not to cross major barriers such as dams and watershed divides 1
- C. Adaptations exist for long-distance dispersal, movement and evidence that offspring often disperse greater than 5 miles of natal origin or greater than twice the home range of typical individual and will cross major barriers such as dams and watershed divides 2
- U. Unknown

Score

Documentation:

**NEW YORK
FISH & AQUATIC INVERTEBRATE INVASIVENESS RANKING FORM**

Identify dispersal mechanisms:
This fish is larger than the silver carp and can hybridize with it.
Sources of information:
USFWS 2007

2.4. Practical potential to be spread by human activities, both directly and indirectly – possible vectors include: commercial bait sales, deliberate illegal stocking, aquaria releases, boat trailers, canals, ballast water exchange, live food trade, rehabilitation, pest control industry, aquaculture escapes, etc.)

- A. Does not occur 0
- B. Low (human dispersal to new areas occurs almost exclusively by direct means and is infrequent or inefficient) 1
- C. Moderate (human dispersal to new areas occurs by direct and indirect means to a moderate extent) 2
- D. High (opportunities for human dispersal to new areas by direct and indirect means are numerous, frequent, and successful) 4
- U. Unknown

Score

Documentation:
Identify dispersal mechanisms:
Presently there are no known introductions of this species in the open waters of the United States. Largescale silver carp is a popular culture and food fish within its native range.
Sources of information:
USFWS 2007

2.5. Non-living chemical and physical characteristics that increase competitive advantage (e.g., tolerance to various extremes, pH, DO, temperature, desiccation, fill vacant niche, charismatic species)

- A. Possesses no characteristics that increase competitive advantage 0
- B. Possesses one characteristic that increases competitive advantage 4
- C. Possesses two or more characteristics that increase competitive advantage 8
- U. Unknown

Score

Documentation:
Evidence of competitive ability:
Can live in slightly brackish waters.
Sources of information:
USFWS 2007

2.6. Biological characteristics that increase competitive advantage (e.g., high fecundity, generalist/ broad niche space, highly evolved defense mechanisms, behavioral adaptations, piscivorous, etc.)

- A. Possesses no characteristics that increase competitive advantage 0
- B. Possesses one characteristic that increases competitive advantage 4
- C. Possesses two or more characteristics that increase competitive advantage 8
- U. Unknown

Score

Documentation:
Evidence of competitive ability:
Nocturnal feeder. Can hybridize with Silver Carp.
Sources of information:
USFWS 2007

2.7. Other species in the family and/ or genus invasive in New York or elsewhere?

**NEW YORK

3. ECOLOGICAL AMPLITUDE AND DISTRIBUTION

3.1. Current introduced distribution in the northern latitudes of USA and southern latitude of Canada (e.g., between 35 and 55 degrees).

- | | | |
|----|--|---|
| A. | Not known from the northern US or southern Canada. | 0 |
| B. | Established as a non-native in 1 northern USA state and/or southern Canadian province. | 1 |
| C. | Established as a non-native in 2 or 3 northern USA states and/or southern Canadian provinces. | 2 |
| D. | Established as a non-native in 4 or more northern USA states and/or southern Canadian provinces, and/or categorized as a problem species (e.g., “Invasive”) in 1 northern state or southern Canadian province. | 3 |
| U. | Unknown | |

Score 0

Documentation:

Identify states and provinces:
Not established in the US, no known introductions or importations of this species.
Sources of information:

- See known introduced range at www.usda.gov, and update with information from states and Canadian provinces.

 USFWS 2007

3.2. Current introduced distribution of the species in natural areas in the eight New York State PRISMs (Partnerships for Regional Invasive Species Management)

- | | | |
|----|-----------------------------------|---|
| A. | Established in none of the PRISMs | 0 |
| B. | Established in 1 PRISM | 1 |
| C. | Established in 2 or 3 PRISMs | 3 |
| D. | Established in 4 or more PRISMs | 5 |
| U. | Unknown | |

Score 0

Documentation:

Describe distribution:
Not documented in any PRISMs.
Sources of information:
USFWS 2007

3.3. Number of known, or potential (each individual possessed by a vendor or consumer), individual releases and/ or release events

- | | | |
|----|---|---|
| A. | None | 0 |
| B. | Few releases (e.g., <10 annually). | 2 |
| C. | Regular, small scale releases (e.g., 10-99 annually). | 4 |

NEW YORK
FISH & AQUATIC INVERTEBRATE INVASIVENESS RANKING FORM

- D. Multiple, large scale (e.g., ≥ 100 annually). 6
- U. Unknown

Score

Documentation:

Describe known or potential releases:

While a cultural and food fish within its native range, there are no known importations of this species.

Sources of information:

USFWS 2007

3.4. Current introduced population density, or distance to known occurrence, in northern USA and/ or southern Canada.

- A. No known populations established. 0
- B. Low to moderate population density (e.g., $\leq 1/4$ to $< 1/2$ native population density) with few other invasives present and/ or documented in 1 or more non-adjacent state/ province and/ or 1 unconnected waterbody. 1
- C. High or irruptive population density (e.g., $\geq 1/2$ native population density) with numerous other invasives present and/ or documented in 1 or more adjacent state/ province and/ or 1 connected waterbody. 2
- U. Unknown

Score

Documentation:

Describe population density:

No established populations or known introductions.

Sources of information:

USFWS 2007

3.5. Number of habitats the species may invade

- A. Not known to invade any natural habitats given at A2.3. 0
- B. Known to occur in 2 or 3 of the habitats given at A2.3, with at least 1 or 2 natural habitat(s). 2
- C. Known to occur in 4 or more of the habitats given at A2.3, with at least 3 natural habitats. 3
- U. Unknown.

Score

Documentation:

Identify type of habitats where it occurs and degree/type of impacts:

Largescale silver carp feed on phytoplankton and prefer slow-moving, plankto-rich open waters. This species is nocturnal and remains in deeper waters during daylight hours. Their salinity tolerance is probably similar to that of silver carp, which can live in slightly brackish waters.

Sources of information:

USFWS 2007

3.6. Role of anthropogenic (human related) and natural disturbance in establishment (e.g. water level management, man-made structures, high vehicle traffic, major storm events, etc).

- A. Requires anthropogenic disturbances to establish. 0
- B. May occasionally establish in undisturbed areas but can readily establish in areas with natural or anthropogenic disturbances. 2
- C. Can establish independent of any known natural or anthropogenic disturbances. 3
- U. Unknown.

Score

**NEW YORK
FISH & AQUATIC INVERTEBRATE INVASIVENESS RANKING FORM**

Documentation:
 Identify type of disturbance:
 Largescale silver carp x silver carp hybrids were introduced in temperate Kazakhstan where they became established.
 Sources of information:
 USFWS 2007

3.7. Climate in native range (e.g., med. to high, ≥ 5 , Climatch score; within 35 to 55 degree latitude; etc.)

- A. Native range does not include climates similar to New York (e.g., <10%). 0
- B. Native range possibly includes climates similar to portions of New York (e.g., 10-29%). 4
- C. Native range includes climates similar to those in New York (e.g., $\geq 30\%$). 8
- U. Unknown.

Score

4

Documentation:
 Describe known climate similarities:
 Subtropical to tropical 21-22 degrees degrees N. Although the species can hybridize with silver carp, a temperate species currently established in the Mississippi basin.
 Sources of information:

4. DIFFICULTY OF CONTROL

4.1. Re-establishment potential, nearby propagule source, known vectors of re-introduction (e.g. biological supplies, pets, aquaria, aquaculture facilities, connecting waters/ corridors, mechanized transportation, live wells, etc.)

- A. No known vectors/ propagule source for re-establishment following removal. 0
- B. Possible re-establishment from 1 vector/ propagule source following removal and/ or viable <24 hours. 1
- C. Likely to re-establish from 2-3 vectors/ propagule sources following removal and/ or viable 2-7 days. 2
- D. Strong potential for re-establishment from 4 or more vectors/ propagule sources following removal and/or viable >7 days. 3
- U. Unknown.

Score

0

Documentation:
 Identify source/ vectors:
 While largescale silver carp is a popular culture and food fish within its native range, there are presently no known introductions of this species in the open waters of the US.
 Sources of information:
 USFWS 2007

4.2. Status of monitoring and/ or management protocols for species

- A. Standardized protocols appropriate to New York State are available. 0
- B. Scientific protocols are available from other countries, regions or states. 1
- C. No known protocols exist. 2
- U. Unknown

Score

1

Documentation:
 Describe protocols:
 Silver carp are currently established in the Mississippi River basin and monitored regularly.

**NEW YORK
FISH & AQUATIC INVERTEBRATE INVASIVENESS RANKING FORM**

Sources of information:
USFWS 2007

4.3. Status of monitoring and/ or management resources (e.g. tools, manpower, travel, traps, lures, ID keys, taxonomic specialists, etc.)

- A. Established resources are available including commercial and/ or research tools 0
- B. Monitoring resources may be available (e.g. partnerships, NGOs, etc) 1
- C. No known monitoring resources are available 2
- U. Unknown

Score

1

Documentation:

Describe resources:
Great Lakes fisheries monitoring program
Sources of information:
NYS DEC

4.4. Level of effort required

- A. Management is not required. (e.g., species does not persist without repeated human mediated action.) 0
- B. Management is relatively easy and inexpensive; invasive species can be maintained at low abundance causing little or no ecological harm. (e.g., 10 or fewer person-hours of manual effort can eradicate a local infestation in 1 year.) 1
- C. Management requires a major short-term investment, and is logistically and politically challenging; eradication is difficult, but possible. (e.g., 100 or fewer person-hours/year of manual effort, or up to 10 person-hours/ year for 2-5 years to suppress a local infestation.) 2
- D. Management requires a major investment and is logistically and politically difficult; eradication may be impossible. (e.g., more than 100 person-hours/ year of manual effort, or more than 10 person hours/year for more than 5 years to suppress a local infestation.) 3
- U. Unknown

Score

3

Documentation:

Identify types of control methods and time required:
While technically Largescale Silver Carp are not expected to survive in northeastern US waters, hybridized specimens with Silver Carp would be expected to survive temperate climates.

5

Total for 4 sections Possible

100

Total for 4 sections

63

C. STATUS OF GENETIC VARIANTS AND HYBRIDS:

At the present time there is no protocol or criteria for assessing the invasiveness of genetic variants independent of the species to which they belong. Such a protocol is needed, and individuals with the appropriate expertise should address this issue in the future. Such a protocol will likely require data on cultivar fertility and identification in both experimental and natural settings.

Genetic variants of the species known to exist: Yes

NEW YORK

FISH & AQUATIC INVERTEBRATE INVASIVENESS RANKING FORM

Hybrids (crosses between different parent species) should be assessed individually and separately from the parent species wherever taxonomically possible, since their invasiveness may differ from that of the parent species. An exception should be made if the taxonomy of the species and hybrids are uncertain, and species and hybrids can not be clearly distinguished in the field. In such cases it is not feasible to distinguish species and hybrids, and they can only be assessed as a single unit.

Hybrids of uncertain origin known to exist: Largescale silver carp are most closely related to and can hybridize with silver carp, a species that is established in the Mississippi River basin in the US.
